Chapter 7:

Create a compose.yml file. Once done, run podman-compose up. The compose file should have the exact specification as follows:

- **redis** service specification - Image name should be **redis:alpine** and store its data in a persistent **named volume called redis_data**.
- **clickcounter** service specification - Image name should be **kodekloud/click-counter**, app is run on **port 5000** and expose it on the **host port 8085** in the compose file.
- Both services must be connected to the same custom network named **appnet** to allow internal communication.
